# Post 1 — Soft Launch

Campaign opener | Build curiosity

## Suggested caption

Something new is coming to Pakistani kitchens.

Meet a smarter way to think about your daily ordering. FoodFlow AI is being built to help restaurants, cafés, bakeries and food shops make more informed ordering decisions using their own daily records.

A little less guesswork starts soon. Stay tuned.

## Suggested CTA

**Follow FoodFlow AI for the launch.**

## Suggested hashtags

#FoodFlowAI #PakistaniRestaurants #RestaurantTech #ComingSoon #FoodBusinessPakistan

# Post 2 — Product Reveal

Explain the idea | Introduce the workflow

## Suggested caption

Here is the first look at how FoodFlow AI works.

1. Enter what your kitchen ordered.
2. Keep adding your daily records so the app can learn your kitchen's patterns.
3. Get a daily order suggestion based on those entries.

That’s the idea: turn everyday kitchen records into more useful ordering guidance. And this is only the beginning.

## Suggested CTA

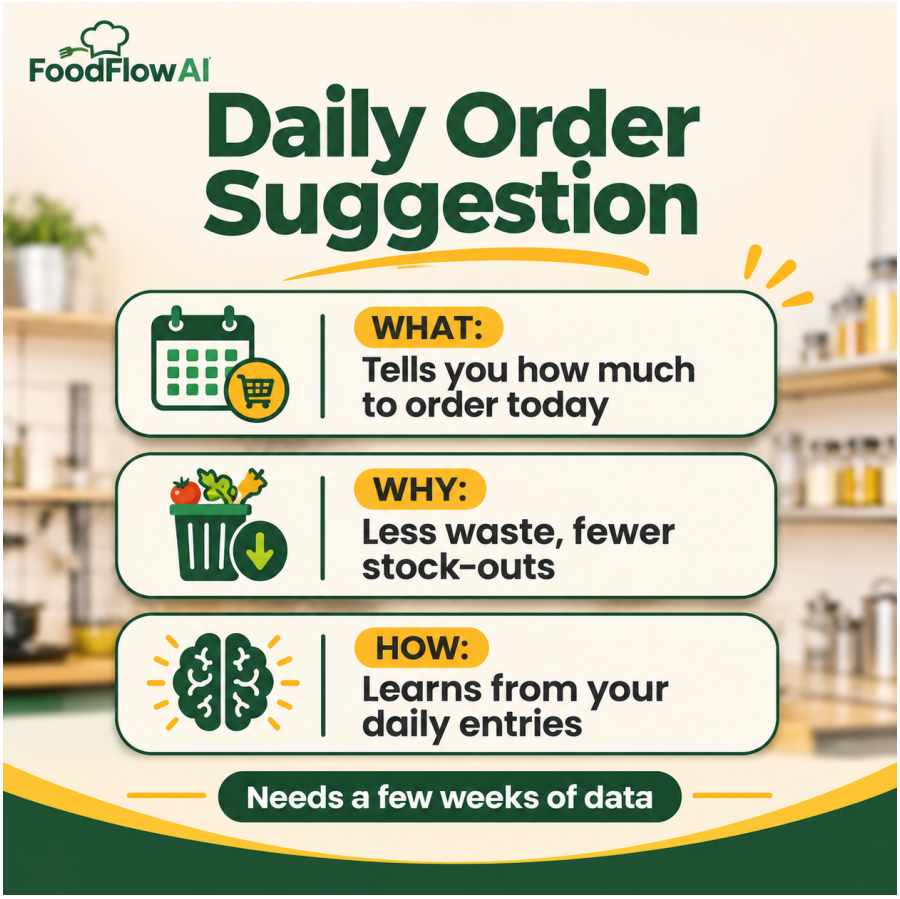

**Follow along for the next feature reveal.**

# Post 3 — Feature Spotlight: Daily Order Suggestion

Educate | Explain what, why and how

## Suggested caption

What should you order today?

FoodFlow AI is designed to learn from your daily entries and suggest how much to order. The goal is to help kitchens make more informed decisions, reduce unnecessary waste and avoid running short on important stock.

It needs a few weeks of daily data to start learning your kitchen’s patterns.

## Suggested CTA

**Save this post and follow FoodFlow AI for updates.**

## Suggested hashtags

# Post 4 — Alert or Advice?

Differentiate | Position the product clearly

## Suggested caption

An alert tells you when stock is low. But what should you order next?

FoodFlow AI is focused on daily order suggestions. It learns from the orders, spending and stock information you enter, then helps you decide how much to order for the day.

The aim is to move from simply noticing stock levels to planning your next order with more context.

## Suggested CTA

**Follow FoodFlow AI to see how daily ordering works.**

## Suggested hashtags

#FoodFlowAI #SmartDailyOrdering #RestaurantOperations #StockManagement #Pakistan

# Post 5 — Problem & Solution

Make the problem relatable | Show the value

## Suggested caption

Too much stock can go to waste. Too little can leave your kitchen short when you need it most.

FoodFlow AI is being built to help restaurants, cafés, bakeries and food shops make more informed daily ordering decisions using their own records.

A better view of what to order starts with keeping track of what comes in, what gets used and what is left.

## Suggested CTA

**Share this with someone who manages a food business.**

## Suggested hashtags

#FoodFlowAI #FoodWaste #RestaurantManagement #CafeBusiness #FoodBusinessPakistan

# Post 6 — Key Feature: Know What to Order Today

Make the feature tangible | Show an example screen

## Suggested caption

A daily order suggestion, at a glance.

This example screen shows how a FoodFlow AI suggestion could look:
• Chicken — 12 kg
• Onions — 8 kg
• Rice — 20 kg

These quantities are illustrative only. FoodFlow AI's suggestions are intended to be informed by the daily records entered for each kitchen.
